

## SUPERNOVA THE LATEST IN WAX TECHNOLOGY SYNTHETIC RESIN

All Supernova Waxes are manufactured from a world class, synthetic grade specially manufactured resin. This is an FDA approved product, as well as a cosmetic grade product. It is also completely non-toxic to the skin.

The base of Supernova resin is derived from a variety of cosmetic grade approved oils.

Supernova is often affectionately referred to as a “**plastic**” wax by our customers. Because of it has no pungent rosin smell, is a non-skin irritating product, consistent formula from batch to batch, and overall unique nature.

- Supernova is not plastic based molecularly, nor is this resin type used in straws or plastic packets that pollute the worlds seas and landfills.
- This type of harmful-to-the-skin industrial grade plastic resin used to make plastic products contains harmful chemicals like BPA, Silicates and Phthalates. **While Supernova does NOT contain any of these products.**
- The resin family of Supernova versus Plastic products are completely on different spectrums.
- Plastic, by simple definition, can be described as follows, by dictionary definition: “**a synthetic material made from a wide range of organic polymers**”.
- Supernova is manufactured using a synthetic resin compound. Completely safe for skin contact and approved for use in a wide range of cosmetic products globally. We have chosen to use this world class products in our waxes.
- This very special Supernova resin is used to ensure client comfort during waxing treatment and low heat during each waxing application, to ensure client comfort.
